

## Testimonies February 2019

Woman came to see the poster about the upcoming Healing Workshop. After some conversation she mentioned that she was in need of healing. She had wrist supports on both arms. She was in pain. We lifted her up to the Lord and commanded, in the name of Jesus, that whatever was causing the pain be gone. For all pain and the spirit of infirmity to go. She open and closed her hands and declared they were much better. We prayed once again and I could see that Holy Spirit was working in her, healing her. Praise God.

Another woman came over to me dealing with a bad cold, she said. I took her hands and commanded the spirit of infirmity to leave and for her lungs to be healed and the cough to be gone. We talked about the fact that Jesus took infirmity and sickness away at the cross and I assured her of her healing. She wiped away tears as she received her healing.

Woman with pain in right shoulder. With permission I laid my hand on her shoulder and commanded the muscles, tendons, ligaments, and nerves to be healed. For all pain to go. In Jesus name. She felt the healing heat of the Holy Spirit and I know He is totally healing her.

I had a word of knowledge about someone with upper right teeth pain. I spoke it out at the end of service and prayed for one man. I commanded the nerves to be healed and for all pain to go in Jesus name.

Then a woman came up to me with sinus pain. I commanded the sinus to dry up and for pain to go. Then I had her breathe deeply through her nose. All was clear. Thank you Jesus.

Another woman was having pain in her right arm. I had her stretch her arms forward and one was an inch shorter than the other. I commanded it to grow and for all pain to go. She tested her arm and the pain was gone. Praise God. Received confirmation a week later that her arm has been pain free ever since.

My neighbor was cutting his lawn and we got to, yeah sure. So I laid my hand on his back and commanded that back pain to leave right now and for his back to be strengthened and for all pain to go in Jesus name. I believe that he's going to wake up tomorrow and the next day and each day with less and less pain. It is going to be progressively better. Thank you Lord for his healing.

I was at a home today helping an older gentleman with his computer. His eyesight was very poor and he needed to learn how to use the magnifier in Windows. We got to talking and I was able to lay hands on him and command the spirit of blindness off of him, for his eyes to be regenerated and his eyesight to be perfect. I also prayed for his daughter and his wife. When we finished I had him read some things and he could see much better. We thanked Jesus for restoring this man's eyesight, in Jesus name.

And there was a dozen of us at our house for the first night of the healing workshop. It was a great night. There was lots of interaction as we read scripture and talked about how we are all called to lay hands on the sick and see them recover. And that the Father wants all to be healed.

We ministered to a number of people. One man had pain in left leg. I asked if I could pray for him and placed my hand on that knee. I commanded the knee restored and for all pain to go. He checked and felt no pain. Praise God.

Prayed with one woman for her mother in law with cancer. Another man with knee issues. One man with braces on both wrists. A couple for jobs. And more. Thank you Jesus for using both of us.

Man with damaged foot. Not sure if broken or sprained. Laid my hand on it commanding total healing, for all bones to be mended. In Jesus name. Woman for eyesight, man for hearing, man for brain issues, another for soundness of mind, and many more. We know in our knower they were all healed. Thank you Jesus.

Prayed for a woman with shoulder pain. Grew out her arms an inch. Commanded pain to leave and for shoulder to be restored.

I prayed for a man a couple of weeks ago and his wife reported today he had not gotten any better with the meds he had been on. Ever since we prayed he has been getting better each day. Praise Jesus.
